

Data Visualization & Storytelling

2.3: Composition & Comparison Charts

1. Create a pie chart in Tableau using a categorical variable from your data set.
 - a. Determine 1 reason why a pie chart would or wouldn't be a good visualization choice.
 - i. A pie chart would be a good visualization since my hypothesis is testing two categories: vulnerable population and the non vulnerable group in terms of mortality rate.
 - b. Use the visualization style guide you created in Exercise 2.2: Visual Design Basics & Tableau to design the visualization.
 - c. Create a Word document with your answer to 1a and a screenshot of your pie chart.

2. Create a bar (or column/stacked) chart in Tableau using age as the category. You must decide what you're counting.
 - a. Use color to add another dimension to the chart.
 - b. Use the visualization style guide you created in Exercise 2.2: Visual Design Basics & Tableau to design the visualization.

c. Add a screenshot of your bar chart to the Word document you created in step 1.

3. Turn the bar chart you created in step 2 into a treemap.

- Use the visualization style guide you created in Exercise 2.2: Visual Design Basics & Tableau to design the visualization.
- Add a screenshot of your treemap to the Word document you used in steps 1 and 2.
